Dear Sir or Madam :

I writing to apply for the graduate position in Data and Analytics. I completed my Master's degree in Physics and Mathematics on the 7th of May and this position has taken my interest. I am interested in the emerging field of data analytics and machine learning and how these can be implemented in real world situations. I feel that I am fit for the position due to the following points. Physics as a discipline is based on a strong theoretical fundament and the ability to solve problems and I have this competence. I have an analytical competence through studying mathematics. During my tertiary education at Roskilde University, I have gained the ability to adapt to new projects outside my expertise quickly and I am comfortable and prefer to work in a team environment. I am a motivated, stable worker who is looking for new challenges and I feel that I can contribute to your company using my unique degree in Physics and Mathematics.

I have attached a copy of my CV and a transcript of my bachelor and master's degree. I look forward to hearing from you about this position.

Sincerely,

Nathan Hugh Barr
