Dear Morten Dichmann Hansen:

I writing to apply for the Systemspecialist til IAM (7854). I completed my Master's degree in Physics and Mathematics on the 7th of May and this position has taken my interest. I am interested in IT solutions using computer programming. I have no past experience with the IAM framework but since my master's degree in Physics and Mathematics is quiet broad and I consider myself as a generalist. I believe that this can benefit your team as I have the ability to quickly create an overview when moving into new projects. I am currently learning how to program in python, I feel that this is going smooth due to having worked with the program called Matlab throughout my education. Most of my semester projects have had a mathematical modelling aspect where my project members and I have had to program scripts to open and process data with mathematical models. I was a member of the Roskilde University Scienceshow and from that job I have gained the ability to formulate and communicate complex idea's and concept's to different groups of people without losing the essence of what I am trying to convey. I view myself as a cheerful and optimist person who enjoys working in a team environment. I am a motivated and stable worker who is looking for new challenges. I feel that I can contribute to your team using my unique degree in Physics and Mathematics and my ability to quickly immerse myself in new projects.

I have attached a copy of my CV and a transcript of my bachelor and master's degree. I look forward to hearing from you about this position.

Sincerely,

Nathan Hugh Barr
